Preamble

To meet the challenge of ensuring excellence and NEP 2020 policy in engineering education, the issue of quality needs to be addressed, debated, and taken forward systematically. Accreditation is the principal means of quality assurance in higher education. The major emphasis of the accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of the University of Mumbai has taken the lead in incorporating the philosophy of NEP 2020 education in the process of curriculum development.

The second-year engineering course is a core training program to impart scientific and logical thinking training to learners in general, with a choice of course selection from the program core course, multidisciplinary minor, and vocational skill-enhanced course. Simultaneously, the objectives of NEP 2020 demand nurturing the core program and skills required for the Electrical Engineering Branch of engineering in the learner. Keeping this in view, a pool of courses is offered in Core Courses covering fundamentals required to understand core and modern engineering practices and emerging trends in technology. Considering the shift in pedagogy and the convenience of a stress-free learning process, a choice-based subject pool is offered in the coursework under the heads of Electrical Engineering in Engineering for open electives and multidisciplinary minor courses in the third and fourth semesters. Essentially, to give a glimpse of trends in the industry under vocational and enhanced skill practices, the pool is offered to nurture and develop creative skills in contemporary industrial practices. Criteria met in the structure is the opportunity for learners to choose the course of their interest in all disciplines.

Program Core Course Cover Electrical Engineering core courses. Also, OE and MDM where a pool of subjects are given for selection. Considering the present scenario, diverse choices need to be made available to fulfill the expectation of a learner to aspire for a career in the field of current trends of Technology and interdisciplinary research. Ability enhancement can be achieved in Undergraduate training by giving an objective viewpoint to the learning process and transitioning a learner from a rote learner to a creative professional. for the purpose Design Thinking is introduced in the First Semester to orient a journey learner to become a skilled professional. Considering the NEP-2020 structure of award of Certificate & Diploma at multiple exit-point pools of Vocational skills is arranged for giving exposure to the current Industry practices.

The faculty resolved that course objectives and course outcomes are to be clearly defined for every course so that all faculty members in affiliated higher education institutes understand the depth and approach of the course to be taught, which will enhance the learner's learning process. NEP 2020 grading system enables a much-required shift in focus from teacher-centric to continuous-based learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation, which will enhance the quality of education. Credit assignment for courses is based on a 15-week teaching-learning process for NEP 2020, however, the content of courses is to be taught in 12-13 weeks, and the remaining 2-3 weeks are to be utilized for revision, tutorial, guest lectures, coverage of content beyond the syllabus, etc.

There was a concern that in the present system, the second-year syllabus must not be heavily loaded to the learner and it is of utmost importance that the learner entering into the second year of an engineering course should feel at ease by lowering the burden of syllabus and credits. This is necessary for a learner to get accustomed to the new environment of a college and to create a bond between the teacher and the learner. The present curriculum will be implemented for the Second Year of Engineering from the academic year 2025-26. Subsequently, this system will be carried forward for Third Year and Final Year Engineering in the academic years 2026-27, and 2027-28, respectively.

Course Objectives: The course is aimed

1. To familiarize with the Laplace Transform, Inverse Laplace Transform of various functions, and its applications.
2. To familiarize the concept of complex variables, C-R equations, harmonic functions, its conjugate and mapping in complex plane
3. To understand the application of Engineering Mathematics to analyze, design, and optimize electrical systems.
4. To use mathematical models to predict how electrical systems will perform under different conditions, allowing designing efficient and reliable technologies in power systems.

Course Outcomes: At the end of the course, students will be able to

1. Apply the concept of Laplace transform and inverse Laplace transform to solve the real integrals in engineering problems.
2. Find orthogonal trajectories and analytic function by using basic concepts of complex variables.
3. Apply Linear Algebra and Complex number operation for the analysis of electrical circuits.
4. Analys electric circuit behavior through matrix operations
5. Analyze the effect of switching conditions on electrical networks using differential equations
6. Analyze time-domain signals and circuit responses using Laplace Transform.

Detailed Syllabus:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
I	Laplace Transform	Definition of Laplace transform and Laplace Transform (L) of Standard Functions like e^{at}, $sin(at)$, $cos(at)$, $sinh\,(at)$, $cosh\,(at)$ and t^n, $n \geq 0$. Properties of Laplace Transform: Linearity, First Shifting theorem, Second Shifting Theorem, change of scale	**5**	CO1

		Property, multiplication by *t*, Division by *t*, Laplace Transform of derivatives and integrals (Properties without proof). Evaluation of integrals by using Laplace Transformation. Inverse Laplace Transform, Linearity property, use of standard formulae to find inverse Laplace Transform, finding Inverse Laplace transform using derivatives. Inverse Laplace transform by Partial fractions.		
II	Function of Complex Variables	Analytic function, necessary and sufficient conditions for *f(z)* to be analytic (without proof). Cauchy-Riemann equations in cartesian coordinates (without proof). Milne-Thomson method to determine analytic function *f(z)* when real part (*u*) or Imaginary part (*v*).	**4**	CO2
III	Application of Linear Algebra and Complex Variables to circuit analysis:	With DC Dependent Sources: Mesh analysis, Super mesh analysis, Nodal analysis, Super node analysis. Superposition theorem, Thevenin's theorems, Norton's theorem, Maximum power transfer theorem; With AC Sources: Magnetic coupling, Mesh analysis, Nodal analysis, Superposition theorem, Thevenin's theorems, Norton's theorem, Maximum power transfer theorem and Reciprocity theorem.	**5**	CO3
IV	Analysis of Electric circuit behavior through matrix operations	Graph Theory and Network Topology: Introduction, Graph of network, Tree, Co-tree, Loop incidence matrix, Cut set matrix, Tie set matrix and Loop current matrix, Number of possible tree of a graph, Analysis of network equilibrium equation and Principle of duality.	4	CO4
V	Application of Differential Equations for analyzing circuits with capacitors and inductors	Solution of first and second order differential equations for series and parallel R-L, R-C, R-L-C circuits, initial and final conditions in network elements, forced and free response, time constants, steady state and transient state response.	**4**	CO5
VI	Electrical Circuit Analysis Using Laplace Transforms	The Laplace transform and its application in electrical circuit analysis, transient and steady state response to step, ramp and impulse signals.	**4**	CO6

Note: Numerical should be covered in Tutorials.

Term Work:

- Term work: Term work consists of minimum eight tutorials (at least one on each module) and Assignments (min. 2).
- The distribution of the term work shall be as follows:
  Tutorials: 15 marks
  Assignments: 05 marks
  Attendance (Theory and Tutorial) :05 marks

The final certification and acceptance of term-work ensures the minimum passing in the Term Work.

Internal Assessment (IA):

- IA will consist of Two Compulsory Internal Assessment Tests (Each Test of 20 Marks). Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

Question Paper Format:

- Question Paper will comprise of a total of **six questions each carrying 15 marks. Q.1** will be **compulsory** and should **cover maximum contents of the syllabus.**
- **Remaining questions** will be **mixed in nature** [part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules].
- A total of **four questions** needs to be answered.

Course Objectives: This course is aimed

1. To understand the performance parameters of DC machines.
2. To illustrate the working principle and evaluate the performance of single-phase transformers under different operating conditions.
3. To analyze various connections and performance characteristics of three-phase transformers.
4. To demonstrate the working principle and assess the performance of three-phase induction motors under various operating conditions.
5. To examine different starting methods and speed control techniques for three-phase induction motors.
6. Understand the working of single-phase induction motors.

Course Outcomes: At the end of the course, students will be able to

1) Understand the significance of the DC machines performance parameters.
2) Illustrate working principle and performance of single-phase transformer under different operating conditions.
3) Analyze connections and performance of three phase transformers under various conditions.
4) Demonstrate working principle and evaluate the performance of three phase induction motor under various operating conditions.
5) Exemplify various starting methods and speed control of three phase induction motor.
6) Understand the working of single-phase induction motors.

Detailed Syllabus:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
I	DC Machines	Review of working principles of DC machines, concept of back EMF and torque equations,	08	CO1

		Commutation, Armature reaction, Types of DC machines, Characteristics of DC machines (speed – torque and performance), Necessity of starter, Speed control methods, Losses and efficiency, Swinburne's, Hopkinson's tests.		
II	Single phase Transformer	Review of working principle, EMF equation and Equivalent Circuit, Phasor diagram (Resistive, Inductive and capacitive load), voltage regulation, Losses and Efficiency, Condition for Maximum Efficiency, Parallel Operation: No load Operation, On load Operation: - Equal and Unequal Voltage Operation, OC and SC test, Sumpner's Test	08	CO2
III	Three Phase Transformer	Principle of operation, Connections and Phasor groups, Parallel operation, Harmonics in three phase transformers, Suppression of harmonics, Oscillating neutral phenomenon, Open delta or V - connection, Scott Connection.	07	CO3
IV	Three Phase Induction Motor:	Review of Constructional details and Principle of operation, Slip, Rotor emf and frequency, current and power, Power stages, Phasor diagram, Equivalent circuit, Torque-speed characteristics, Losses and efficiency, No load and blocked rotor test, Circle diagram	08	CO4
V	Starting and Speed control of Three Phase Induction Motor:	Need of starter, Types of starters: Direct On Line (DOL) starter, Rotor resistance starter, Autotransformer and Star delta starters, Speed control: Voltage control, Frequency control, Pole changing method, V/f control.	4	CO5
VI	Single phase Induction Motor:	Principle of operation, Double field revolving theory, Equivalent circuit of single-phase induction motor, starting methods; Split phase starting- Resistance spilt phase, capacitor split phase, capacitor start and run, shaded pole starting	4	CO6

2223113	Electronics Engineering	3	--	-	3	-	-	3

Course Code	Course Name	Examination Scheme					
		Theory Marks					
		Internal Assessment (IAT)			End Sem. Exam.	Exam. Duration (in Hrs.)	Total Marks
		IAT-I	IAT-II	IAT-I + IAT-II (Total)			
2223113	Electronics Engineering	20	20	40	60	2	100

Course Objectives: The course is aimed to

1. To impart a foundational understanding of digital logic principles, including number systems, Boolean algebra, and combinational circuit design.
2. To enable students to analyze, design, and implement basic sequential circuits and understand the fundamental principles of memory elements.
3. To familiarize the student with the principle of operation, analysis and design of junction diode, BJT Transistors and FET.
4. Analyze and design analog circuits using semiconductor devices.
5. Understand the basics of microcontrollers.
6. Write assembly language and C programs for microcontrollers to perform various tasks.

Course Outcomes: At the end of the course, students will be able to

1. Perform number system conversions, simplify Boolean expressions using K-maps, and design combinational circuits for various applications.
2. Explain the operation of flip-flops, design basic sequential circuits like shift registers, and describe the functionality of semiconductor memories.
3. Understand the fundamental principles of Analog electronics.
4. To study and design Op Amp Circuits.
5. Describe the concept of microcontroller architectures.
6. Understand the architectural features of MCS-51 variants and select a suitable microcontroller to suit the application.

Detailed Syllabus:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
---	Prerequisite	Understanding of basic electronic components, circuits, and concepts (e.g., voltage, current, resistance, capacitance).	---	---

I	Introduction To Digital Logic	Number Systems and Conversions: Binary, Hexadecimal, Octal, and Decimal conversions. Basic binary arithmetic (addition, subtraction). Logic Gates and Boolean Algebra: AND, OR, NOT, NAND, NOR, XOR gates. Boolean algebra laws and simplification techniques (De Morgan's theorems). Karnaugh Maps (K-maps): Simplification of Boolean expressions using K-maps (up to 4 variables).	6	CO1
II	Combinational, Sequential Circuits & Memory Elements	Combinational Circuit Design: Adders (half, full), Subtractors, Multiplexers (as Universal Logic Modules - ULM), Demultiplexers. Flip-Flops: SR, JK, D, and T flip-flops. Basics of Synchronous & Asynchronous counters. Memory Basics: ROM (types: Mask ROM, PROM, EPROM, EEPROM) and RAM (types: SRAM, DRAM), their basic operation, and differences.	7	CO2
III	Semiconductor Devices	P-N junction diodes: characteristics and applications, Zener diodes: operation and voltage regulation, Light Emitting Diodes (LEDs): construction and characteristics, Opto isolators. BJT structure and operation, BJT characteristics and regions of operation, Junction Field Effect Transistors (JFETs): Construction, operation and device characteristics. V-I relationship and transconductance. Metal-Oxide-Semiconductor FETs (MOSFETs): types, operation, and characteristics.	6	CO3
IV	OP-Amp & Voltage Regulators	Block diagram of Op-amp Ideal Op-Amp characteristics, Inverting and non-inverting configurations, Voltage regulators: Design of adjustable voltage regulators	5	CO4
V	Fundamentals of Microcontroller	Introduction to 8-bit microcontrollers- Basic differences and similarities between Microprocessor and Microcontroller-Types of various architectures; Harvard and Von-Neumann, RSIC and CSIC Concept of pipelining-Selection of microcontrollers, variants of MCS-51 family and their features.	8	CO5
VI	Architecture And Assembly Language Of 8051	8051 microcontroller hardware: Oscillator and Clock, Role of PC and DPTR, Flags and PSW, CPU registers, Internal RAM and RAM organization, Internal Memory, Special Function Registers, I/O pins, ports and circuits, 8051 Addressing modes, Instruction set: Classification, syntax and function of instructions, example programs.	7	CO6

2223114	Measurements and Measuring Instruments	20	20	40	60	2	100

Course Objectives: The course is aimed to

1. To Understand the fundamental principles of measurement and the working of various measuring instruments.
2. To Explain the construction, working, and applications of different types of analog measuring instruments for electrical quantity measurement.
3. To Demonstrate the procedure for balancing AC and DC bridges for determining unknown electrical parameters.
4. To Analyze the working and characteristics of various transducers used for measuring non-electrical quantities.
5. To Compare different types of digital measuring instruments and their significance in electrical measurements.
6. To Evaluate the performance of signal conditioning circuits and advanced measuring instruments for accurate measurement and data acquisition.

Course Outcomes: At the end of the course, students will be able to

1. Comprehend the principles of measurement and various measuring instruments.
2. Describe various types of analog measuring instruments for measurement of electrical quantities.
3. Apply the concepts of balancing of AC, DC Bridges for measurement of unknown electrical parameters.
4. Illustrate the working of various types of transducers for measurement of non-electrical quantities.
5. Describe various types of digital measuring instruments for the measurement of electrical quantities.
6. Illustrate various Signal conditioning and advanced measuring instruments

Detailed Syllabus:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
	Prerequisite	Basic potentiometer circuit, Moving Coil and Moving Iron instruments.		
I	Philosophy of Measurement	Introduction to measurement, Methods of measurement, Classification of instruments, Types of errors in measurement, standardization and calibration of instruments.	**04**	**CO1**
II	Analog Measurement of Electrical Quantities	***Analog Instruments:*** Classifications of analog instruments, Introduction to operating, controlling and damping torque, Extension of range of ammeter and voltmeter, Electro-dynamometer type wattmeter, Electro-dynamometer type Power factor meter. ***Instrument Transformer:*** Current Transformer (CT), Types of CT (measuring and protection), Potential Transformer (PT), Applications in the extension of instrument range, Clamp on ammeter, High voltage potential transformer.	**07**	**CO2**
III	AC-DC Bridges and Potentiometer	***AC, DC Bridges:*** Measurement of resistance: Wheatstone, Kelvins Double, and Megger, earth resistance measurement by earth tester Measurement of inductance and capacitance: Maxwell's bridge, Schering bridge, ***Potentiometer Applications:*** Calibration of ammeter, voltmeter and wattmeter using potentiometer	**07**	**CO3**
IV	Measurement of Non-electrical Quantities	***Transducers:*** definition, Resistive, capacitive & inductive transducers, Optical and digital transducers 1] Measurement of temperature: Thermocouple, Thermistor, Resistance Temperature Detector (RTD) 2] Measurement of displacement: Linear and angular displacement using potentiometer, LVDT 3] Measurement of pressure: Piezoelectric, strain-gauge, capacitive and inductive type 4] Measurement of speed: Inductive and Hall Effect sensor	**07**	**CO4**
V	Digital Measurement of Electrical Quantities	Generalized Block diagram of digital instruments, comparison of digital over analog instruments, Resolution & sensitivity of digital meters, Digital voltmeter (Ramp type), ammeter, multi-meter, Digital frequency meter, Digital Tachometer, Digital Megger, and Digital Storage Oscilloscope, Current sensor (ACS712), Voltage sensor (B25)	**07**	**CO5**
VI	Signal Conditioning and Advanced Measuring Instruments	Basics of AC, DC signal conditioning circuits, Block diagram of Data Acquisition System, Basics of Power analyzer, harmonic analyzer, Signal generator, Q-meter, Introduction to Smart sensor, IoT Based Measuring Instrument, , smart energy meter	**07**	**CO6**

Lab Objectives: The lab course is aimed to

1. To demonstrate the measurement of resistance, including insulation resistance, using appropriate bridge techniques.
2. To apply AC bridge methods for accurate measurement of passive electrical components.
3. To experiment with various sensors and transducers for measuring physical parameters.
4. Provide hands-on experience in the operation, testing, and analysis of DC machines, transformers, and induction motors.
5. Analyze the characteristics, performance, and efficiency of electrical machines through experimental methods.
6. Develop practical skills in conducting standard tests for parameter evaluation and troubleshooting electrical machines.

Lab Outcomes: At the end of the lab course, students will be able to

1. Measure medium, low, and high and insulation resistance using appropriate bridge techniques.
2. Demonstrate/perform the use of AC bridges for measurements of passive electrical components.
3. Analyse various sensors, transducers for measurement of various physical parameters.
4. Operate and test DC machines, transformers, and induction motors using appropriate laboratory instruments and techniques.
5. Analyze and interpret experimental data to determine the characteristics, performance, and efficiency of electrical machines.
6. Perform standard testing procedures such as open circuit, short circuit, load tests, and efficiency evaluation for DC machines, transformers, and induction motors.

Detailed Syllabus:

The Syllabus is same as the Theory Courses “Electrical Machines-I (Course Code: 2223112)” and

"Measurements & Measuring Instruments (Course Code: 2223114).

List of Experiments:

- At least 4 experiments, each from a list for measurement and electrical machines must be conducted.
- At least 1 assignment, each from a list of assignments for measurement and electrical machines must be conducted.

Sr No	**List of Experiments for Measurement**	Hrs
1.	Measurement of the low/medium resistance using bridge.	2
2.	Measurement of High resistance and insulation resistance using Megger	2
3.	Measurement of inductance using Maxwells bridge. (or Hay's/ Anderson's)	2
4.	Measurement of capacitance using Schering's bridge	2
5.	Measurement of R/L/C using a bridge technique as well as LCR meter.	2
6.	Current Measurement using Shunt, CT, and Hall Sensor.	2
7.	Characterize the temperature sensor RTD.	2
8.	Measurement of temperature using Thermistor or thermocouple	2
9.	Linear displacement measurement using LVDT	2
10.	Measurement of Pressure using Pressure transducer (strain gauge etc.)	2

Sr No	**List of Assignments / Tutorials for Measurement Lab**	Hrs
01	Assignment based on measurement of non-Electrical quantities using sensors & transducers	2
02	Assignment based on smart sensing and smart metering.	2

Sr No	**List of Experiments for Electrical Machines**	**Hrs**
1.	Load test on DC shunt motor/ DC compound motor/ DC series motor.	2
2.	Speed control of DC motors.	2

3.	Swinburne's test on DC motor.	2
4.	Hopkinson's test on DC motor.	2
5.	Sumpner’s test on single phase transformer	2
6.	Open circuit and short circuit test on single phase /three phase transformers	2
7.	Parallel operation of transformers.	2
8.	Scott connection of transformer.	2
9.	No load and Blocked rotor test on three phase induction motor. (Determination of equivalent circuit parameters)	2
10.	Performance analysis of three phase induction motor using circle diagram.	2
11.	No load and block rotor test on single phase induction motor.	2
12.	Load test on single phase induction motor.	2

Sr No	List of Assignments / Tutorials for Electrical Machines	Hrs
01	Open circuit and load characteristics of DC shunt generator.	2
02	Study of transformer connections.	2
03	Study of different types of induction motor starters.	2
04	Study of speed control methods used for induction motors.	2

Assessment:

Term Work: Term Work shall consist of at least 8 practicals’ based on the above list. Also, Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical examination will be held based on the above syllabus.

Course Code	Course Name	Teaching Scheme (Contact Hours/Week)				Credits Assigned			
		Theory		Pract.	Tut.	Theory	Pract.	Tut.	Total
2223116	Electronics Engineering Lab	-		2	-	-	1	-	1

Course Code	Course Name	Examination Scheme						
		Theory Marks

		IAT-I	IAT-II	IAT-I +IAT-II (Total)				
2223116	Electronics Engineering Lab	--	--	--	--	25	25	50

Lab Objectives: The Lab course is aimed to

1. Familiarize with basic digital logic gates (AND, OR, NOT, NAND, NOR, XOR, XNOR).
2. Understand the basics of sequential circuits, including latches, flip-flops, and counters.
3. Understand the characteristics of semiconductor devices, including diodes, bipolar junction transistors (BJTs), and field-effect transistors (FETs).
4. Understand the basics of OP-amp, including its characteristics, applications, and limitations.
5. Understand the architecture of the 8051 Microcontroller,
6. Learn 8051 assembly language programming, including data types, operators, control structures, and functions

Lab Outcomes: At the end of the Lab course, students will be able to

1. Understand the basics of digital logic, including binary numbers, logic gates, and Boolean algebra.
2. Analyze and design sequential circuits using logic gates, flip-flops, and counters
3. Design and optimize electronic circuits using semiconductor devices, including amplifiers, switches, and rectifiers.
4. Analyze and solve problems related to OP-amp and voltage regulators, including circuit design, performance measurement, and troubleshooting.
5. Analyze and solve problems using 8051 programming, including debugging and troubleshooting.
6. Design and develop 8051-based systems, including hardware and software components.

Detailed Syllabus:

The Syllabus is same as the Theory Course "Electronics Engineering (Course Code: 2223113)".

List of Experiments:

Expt. No	Name of the Experiments	Hours	LO Mapping
1	Verification of Truth Table of Logic Gates	2	LO1
2	SOP and POS Minimization (different problem statement for each group)	2	LO1
3	Constructing Flip-Flops Using All NAND Gates	2	LO1
4	Diode characteristics and applications (Clampers and Rectifiers)	2	LO2
5	BJT and FET characteristics & analysis	2	LO3
6	Design of adjustable Voltage regulator based on LM317.	2	LO4
7	Use of programming tools Keil Compiler to perform addition and subtraction program using direct and indirect addressing	2	LO5

8	Use of programming tools Keil Compiler to perform multiplication and division programs using direct and indirect addressing.	**2**	LO5
9	Use of programming tools Keil Compiler to perform Largest and Smallest Number.	**2**	LO5
10	Write an assembly language program to find number of odds and number of evens from the array of ten numbers stored in internal RAM 20H onwards.	**2**	LO6
11	Use of programming tools Keil Compiler to perform Interfacing of Stepper Motor.	**2**	LO6

Assessment:

Term Work: Term Work shall consist of at least 8 practicals based on the above list. Also, Term work Journal must include at least 2 assignments/tutorials.

Term Work Marks: 25 Marks
(Total Marks) = 15 Marks (Experiment) + 5 Marks (Assignments) +5 Marks (Attendance)

Practical & Oral Exam.: A Practical & Oral examination will be held based on the above syllabus.

Vertical – 6

2223611	Mini Project (Group Project)	-	-	-	-	-	50	25	75

Note: * Two hours of practical class to be conducted for full class as demo/discussion/theory.

Lab Objective:

1. To encourage students to identify real-world engineering problems and propose solutions.
2. To develop research and analytical skills through literature review and need assessment.
3. To promote teamwork, leadership, and project management skills.
4. To enhance practical knowledge of electrical components, circuit design, and fabrication.
5. To foster innovation, entrepreneurship, and societal impact.
6. To address societal challenges by working on projects related to sustainability, energy efficiency, and smart technologies.

Lab Outcome:

1. Identify and analyze engineering problems by applying fundamental concepts and systematically evaluating possible solutions.
2. Design and implement engineering solutions by developing, fabricating, and testing circuits or electrical systems that integrate theoretical concepts into real-world applications.
3. Perform testing, debugging, and evaluation of engineering projects using appropriate tools and techniques to validate performance.
4. Demonstrate teamwork and project management skills by working effectively in groups, applying project planning methodologies, and managing resources efficiently.
5. Communicate engineering concepts and findings effectively through structured technical documentation, project reports, and oral presentations.
6. Apply ethical and professional responsibilities in engineering project execution by considering societal and environmental impacts while adhering to professional standards.

A. General Guidelines for Mini Project Execution

1. Formation of Student Groups
   - Students shall form groups of 3 to 4 members.
   - Each group should have a faculty supervisor for guidance.
   - Groups must remain fixed throughout the semester.

2. Selection of Project Topic
   - Students should conduct a survey and identify a problem statement.
   - The problem should be approved by the faculty supervisor or an internal departmental committee.
   - The problem statement should be relevant to electrical engineering and align with industry trends.
   - Preference should be given to projects that impact society positively, such as solutions for rural electrification, renewable energy deployment, or community-based smart systems.

3. Implementation Plan
   - Students shall prepare a Gantt Chart/PERT/CPM chart covering weekly activities.

- Each group must maintain a logbook to record weekly progress, supervisor inputs, and troubleshooting notes.
- Students should conduct literature surveys and use reference materials such as application notes, research papers, and technical datasheets.

4. Design and Fabrication Guidelines
   - Initial design and testing should be conducted using software tools such as LTspice, Eagle, Multisim, or OrCAD.
   - Students should prepare electrical/mechanical drawings, schematics, and layouts before starting fabrication.
   - The prototype should be implemented using general-purpose PCB/Bakelite boards; breadboards should be avoided.
   - If required, a PCB design should be developed and fabricated in the lab.

5. Devices, Components, and Systems to be Used
   - Passive components: Resistors, capacitors, inductors, etc.
   - Semiconductor devices: Diodes, transistors (BJT, MOSFET, IGBT), voltage regulators, logic gates, op-amps, etc.
   - Embedded systems: General-purpose microcontrollers (Arduino, Raspberry Pi, PIC, etc.).
   - Electrical Machines: DC motors, AC motors, relays, transformers, etc.
   - Sensors and actuators: Temperature, proximity, motion sensors, etc.

6. Testing and Debugging
   - Students should use lab equipment such as power supplies, multimeters, oscilloscopes (CRO, DSO), function generators, etc.
   - Problems encountered during testing must be recorded and analyzed in the project logbook.
   - The final working model should be validated against the initial problem statement.

B. Suggested Application Domains

Students are encouraged to choose topics from the following domains or propose innovative ideas:

1. Home/Office Automation
2. Renewable Energy Systems
3. Energy Conservation & Storage
4. Battery Charging and Protection
5. Electrical System Protection
6. Lighting Control & Smart Grids
7. Wireless Power Transfer
8. Electrical Components Testing & Measurement
9. Non-Conventional Energy Generation
10. Robotics & Automation
11. Smart City Solutions (IoT-based systems)
12. Biomedical and Health Monitoring Systems
13. Community Engagement Solutions (e.g., smart public lighting, solar-powered rural electrification, accessible technology for differently-abled individuals)

Note: Faculty can offer any other project based on the syllabus which will help students to understand the topic/concept and implement it for real-life application.

C. Assessment and Evaluation Criteria

1. Continuous Evaluation (Term Work) - 50 Marks

The Mini Project progress will be evaluated through at least two reviews per semester:

- Logbook & Supervisor Marks: 20 Marks
- Review Committee Evaluation: 20 Marks
- Quality of Project Report: 10 Marks

2. Final Presentation & Oral Examination - 25 Marks

Students will present their project, including:

- Problem Statement and Clarity
- Innovativeness of the Solution
- Cost-effectiveness and Societal Impact
- Functionality of the Working Model
- Effective Use of Engineering Norms & Standards
- Individual Contribution and Teamwork
- Clarity in Written and Oral Communication

D. Report Submission Guidelines

- The final report must follow the University of Mumbai format.
- It should include an abstract, literature review, methodology, implementation details, results, and conclusions.
- Students should be encouraged to publish their project work in student conferences or competitions.

Course Objectives: The course is aimed

1 To understand the basic properties of signals & systems.
2 To familiarize with the Fourier Series and Fourier Transform of various functions.
3 To acquaint with the concept of Z-Transform and Inverse Z-Transform.
4 To analyze discrete time signals and system in *Z*-Transform domain.
5 To learn frequency domain analysis of signals and systems.
6 To develop the concept of Realization of Linear Systems.

Course Outcomes: At the end of the course, students will be able to

1. Discriminate continuous and discrete time signals and systems along with classifications.
2. Expand the periodic function by using Fourier series for real life problems and complex
3. Understand the transformation of discrete time signal to *Z* domain.
4. Apply the concept of *Z*-Transform and inverse *Z*-Transform to solve the real integrals in engineering problems.
5. Apply transforms to do frequency domain analysis of signal and Systems.
6. Understand the basic structures of FIR and IIR Systems

Detailed Syllabus:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
---	Prerequisite	Solution of linear constant coefficient difference equation, zero input and zero state response.	---	---
I	Introduction to Signals and Systems	Definition of basic signals such as impulse, unit step, unit ramp, Analog to digital conversion of signal, basic discrete time signals. Sampling Theorem (Derivation is not Required). Classification of signals, Signal operations. Concept of a Continuous time (CT) and Discrete time (DT) system, properties and classification of systems, Convolution in DT domain (Matrix Method only)	04	**CO1**
II	Fourier Series and Fourier Transform	Introduction, Trigonometric and exponential Fourier Series, Parseval's theorem for Fourier Series, Power Spectrum and Power Spectral Density of a Periodic Function. Fourier Transform, Properties of Fourier Transform. Energy spectrum and Energy Spectral Density. System analysis of CT system, frequency response of a CT system, Introduction to DTFS and DTFT.	04	**CO2**

III	Z-Transform	Introduction, Definition, one sided and two-sided z-transform, ROC, Properties of ROC, Properties of z-transform. Inverse z- Transform using methods such as long division, partial fraction expansion and residue method.	05	**CO3**
IV	Analysis of DT-LTI systems using z-Transform	Pole-zero plot in DT domain. Transfer Function of LTI System. Solution of linear constant coefficient difference equation using method of z-Transform, transfer function, impulse response and step response.	05	**CO4**
V	Frequency domain analysis of DT -LTI systems.	Relation between Fourier Transform and Z-Transform. Systems classification on pass band frequency, Low Pass, High Pass, Band Pass, Band reject, All Pass. System classification based on phase response and location of zeros. Introduction of IIR and FIR System.	04	**CO5**
VI	Realization of Linear Systems	Basic realization block diagram of CT and DT system. Basic structures of FIR Systems Basic structures for IIR Systems: Direct form – I, direct form – II, series, parallel.	04	**CO6**

Note: Numerical should be covered in Tutorials.

Term Work:

- Term work: Term work consists of minimum eight tutorials (at least one on each module) and Assignments (min. 2).
- The distribution of the term work shall be as follows:
  Tutorials: 15 marks
  Assignments: 05 marks
  Attendance (Theory and Tutorial) :05 marks
  The final certification and acceptance of term-work ensures the minimum passing in the Term Work.

Internal Assessment (IA):

- IA will consist of Two Compulsory Internal Assessment Tests (Each Test of 20 Marks). Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

Question Paper Format:

- Question Paper will comprise of a total of **six questions each carrying 15 marks. Q.1** will be **compulsory** and should **cover maximum contents of the syllabus.**
- **Remaining questions** will be **mixed in nature** [part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules].
- A total of **four questions** needs to be answered.

Course Code	Course Name	Examination Scheme			
		Theory Marks			Total
		Internal Assessment (IAT)	End	Exam	

		IAT-I	IAT-II	IAT-I + IAT-II (Total)	Sem. Exam	Duration (in Hrs.)	
2224112	Electromagnetic Fields and Waves	20	20	40	60	2	100

Course Objectives: This course is aimed

1. To provide the students with a solid foundation in engineering fundamentals required to solve problems and also to pursue higher studies.
2. To acquire the knowledge of Electromagnetic field theory that allows the student to have a solid theoretical foundation to be able in the future to design emission, propagation and reception of Electro -magnetic wave systems.
3. To acquire the knowledge of time varying Electric Wave that allows the student to have a solid theoretical foundation to be able in the future to design emission, propagation and reception of Electric field
4. To acquire the knowledge of time varying magnetic that allows the student to have a solid theoretical foundation to be able in the future to design emission, propagation and reception of Magnetic field
5. Apply mathematical techniques and electromagnetic field theory to analyze and design simple electromagnetic system
6. Recognize common sources of EMI, including natural and man-made sources.

Course Outcomes: At the end of the course, students will be able to

1. Apply vector calculus concepts along with physical principles and properties to effectively solve problems encountered in everyday life.
2. Solve the electrostatic problems using coulombs law and gauss's law.
3. Understand the concept conductors, dielectrics, boundary conditions and capacitance
4. Solve the magnetic field problems using the laws of magnetism and vector calculus
5. Apply the Maxwell's equations to understand the electromagnetic wave propagation
6. Explain EMC regulation and methods of eliminating interferences

Detailed Syllabus:

Sr. No.	Name of the Module	Detail Content	Hours	CO Mapping
---	Prerequisite	Basic Electrical Engineering and Basic Vectors	---	---
1	Vector Analysis	Vector analysis, Cartesian, Cylindrical and Spherical coordinate systems, Relationship between the coordinate systems, Properties of coordinate system, Introduction to Gradient, divergence, and curl of a coordinate system	4	CO1
2	Electrostatics	Coulomb's law and its applications, Electric field intensity, Electric flux densities for various charge distributions such as line, surface, and volume - Gauss's law and its applications - Electrostatic potential, Divergence theorem - Convection and Conduction current - Electric field in free space, conductors, and dielectrics, Electrostatic boundary value problems: Poisson's and Laplace's equations and solutions	8	CO2

3	Electrostatics Applications	Current and current density - continuity of current - conductor properties and boundary conditions - the nature of dielectric materials - boundary conditions for perfect dielectric materials -capacitance - different types of capacitances – energy density in electric field	7	CO3
4	Magnetostatic Fields	Magnetic field intensity - Bio Savart's law - Ampere's circuit law - Magnetic flux and Magnetic flux density, Magnetic flux density in free space, conductor, and magnetic materials - Magnetic force, Magnetic Vector potential - Stroke's theorem.	7	CO4
5	Maxwells Equations and Electromagnetic Waves	Faraday's laws- Faraday's law - Lenz's law - Maxwell's equations in differential and integral forms - displacement current - Electromagnetic wave equations – wave parameters - velocity, intrinsic impedance, propagation constant - waves in free space, lossy and lossless dielectric, conductors-skin depth –Poynting Theorem	8	CO5
6	Applications of Electromagnetic Waves	EMI / EMC, EMI Sources - Effects of EMI – Testing Methods for EMI/EMC, Methods to suppress EMI-Grounding and shielding. EMC standards - Practical issues of EMI/EMC non compliances, biological effects of EMI / EMC – ESD – EMP	5	CO6

2224113	~~Power Electronics Devices and Circuits~~	20	20	40	60	2		100
2224113	Power Electronics Devices and Circuits	3	--	-	3	-	-	3

Course Objectives: This course is aimed

1. To enhance the knowledge of fundamentals of various semiconductor devices, their operation and characteristics & selection of power devices.
2. Analyze phase-controlled rectifiers for different loads.
3. The basic topology, switching techniques and analysis of various types of DC-DC converters.
4. The basic topology, analysis using performance parameters of single and three phase AC-DC converters with various loads.
5. To explain the need & operation of drive circuits and snubber circuits & heat sinks.

Course Outcomes: At the end of the course, students will be able to

1. Understand the basic operation and characteristics of various semi controllable and fully controllable devices.
2. Analyze phase-controlled rectifiers for different loads.
3. Apply the knowledge of power electronics in the analysis of DC –DC converters.
4. Analyze DC –AC converters & control their operation using PWM techniques.
5. Identify various auxiliary circuits and requirements in power electronics applications.

Detailed Syllabus:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
I	**Thyristors (Silicon Controlled Rectifier)**	Modes of operation of silicon-controlled rectifier, Static V-I characteristics, gate control, Two transistor Analogy, Thyristors voltage & current rating, Firing circuits (R, RC, Ramp triggering using UJT), Protection circuit of SCR.	**06**	**CO1**
II	**Power Semiconductor Devices**	Characteristics of Power diodes, Power BJTs, Power MOSFETs & IGBTs, Safe Operation Area (SOA) for each device, Comparison of Power BJT, PMOSFET & IGBT, Wide band gap devices (Silicon Carbide SiC and GaN), ON state (Conduction) and switching losses, numericals on losses, understanding of MOSFET & IGBT Data sheet.	**08**	**CO1**
III	**Controlled Rectifiers (AC to DC Converter)**	Single phase full wave-controlled rectifiers (mid-point and bridge configuration) for R and R-L load, Numerical for Calculation of output voltage, Rectification and inversion mode of single phase fully controlled rectifier, single phase dual converter, three phase full converter with R load, Single phase PWM rectifier, basic working principle, Applications	**08**	**CO2**

IV	**DC-DC switched Mode Converters**	Basic principle of step-down operation & PWM control of DC-to-DC convertor, Analysis of Buck, Boost, Buck-Boost, converters (All with resistive load and only CCM mode), Output voltage ripple. Comparison of non-isolated converters, Bidirectional dc to dc converters Applications: Power Factor Correction Circuits, LED lamp driver, **Numerical included**.	**06**	**CO3**
V	**DC-AC Converter (Inverter)**	Principle of operation of single-phase half and full bridge inverters, Voltage control in single phase inverters, Pulse width modulated inverters, Multiple PWM, Sinusoidal PWM, three phase VSI (120° and 180° conduction mode), Single phase current source inverters (CSI), comparison of VSI and CSI. Application of inverters	**06**	**CO4**
VI	**Auxiliary Circuits**	Need for Snubber circuit, Function and Types of Snubber Circuits, Turn-Off Snubber, Requirement of gate driver circuits, Gate drivers for Power MOSFET & IGBT, level shifters, bootstrap drivers, isolated drivers, Heat sinks & examples on heat sink calculation	**05**	**CO5**

		IAT-I	IAT-II	IAT-I +IAT-II (Total)				
2224114	Electromagnetic Fields and waves Lab	--	--	--	--	25	25	50

Lab Objectives: The Lab course is aimed to

1. To develop students' ability to apply vector analysis techniques to solve problems in various engineering
2. To understand the concept of charge concentration and its relation to electric field strength.
3. To relate the fundamental principles of electrostatics to real-world applications.
4. To explore the magnetic fields generated by various current configurations (straight wires, loops, solenoids).
5. To design and conduct experiments to demonstrate the generation, propagation, and properties of EM waves.
6. Understanding EMI/EMC Fundamentals

Lab Outcomes: At the end of the Lab course, students will be able to

1. Describe the relationship between vectors and coordinate systems.
2. Design simple experiments to investigate electrostatic phenomena.
3. Predict the behavior of charged particles in various electrostatic devices.
4. Calculate the magnetic field produced by simple current configurations using Biot-Savart Law or Ampere's Law.
5. Recall Maxwell's equations in integral and differential form.
6. Solve simple EMI/EMC problems.

Detailed Syllabus:

The Syllabus is same as the Theory Course “Electromagnetic Fields and Waves (Course Code: 2224112)”.

List of Experiments:

Expt. No	Name of the Experiments	Hours
1	Represent vectors in various Coordinate system using MATLAB/SCILAB	**2**
2	Sketch the Surface in Cartesian Coordinates, Cylindrical Coordinates and Spherical Coordinates using MATLAB/SCILAB	**2**
3	Translate vectors between coordinate systems using MATLAB.	**2**
4	Find electric field Intensity due to point charges, line, surface, and volume charge density using MATLAB/SCILAB.	**2**
5	Find Electric flux density due to point charges, line, surface, and volume charge density using MATLAB/SCILAB.	**2**
6	Plot magnetic field lines around a current-carrying wire using MATLAB/SCILAB.	**2**

7	Visualise Maxwell's equations using MATLAB.	**2**
8	Simulate the propagation of an electromagnetic wave using MATLAB/SCILAB	**2**
9	Simulate the effect of EMI on a signal using MATLAB	**2**
10	Display the charge distribution of Parallel plate capacitor computed by using MATLAB/SCILAB	**2**
11	Find the Poynting vector of a standing wave and compute the power of plane waves from the pointing vector using MATLAB/SCILAB	**2**
12	Compute dielectric-dielectric boundary conditions between medium1 and 2 using MATLAB/SCILAB	**2**
13	Analyse EMI/EMC of cables using MATLAB.	**2**

				(Total)				
2224115	Power Electronics Devices and Circuits Lab	--	--	--	--	25	25	50

Lab Objectives: The Lab course is aimed to

1. To impart knowledge about various power semiconductor devices related to its characteristics, ratings, protection and to select semiconductor devices for various applications.
2. To introduce different methods of power conversion such as ac to dc, dc to dc, dc to ac the underlying principles of converter operation and hence to analyze different converter circuits for power conversion.
3. To keep abreast with the latest technologies and research going on in different domains related to power electronics

Lab Outcomes: At the end of the Lab course, students will be able to

1. Draw V-I characteristics of power electronic devices and analyze the firing circuit of SCR
2. Analyze various single phase and three phase power converter circuits and understand their applications.
3. Analyze DC to DC & DC to AC converter circuits and their applications
4. Identify and describe various auxiliary circuits and requirements in power electronics applications such as gate driver circuit, snubber circuits and heat sinks
5. Simulate the performance of power electronic conversion systems

Detailed Syllabus:

The Syllabus is same as the Theory Course "Power Electronics Devices and Circuits (Course Code: 2224113)".

Suggested List of Laboratory Experiment:

Sr No	List of Experiments	Hrs
Group-A - Hardware Based Experiments		
01	Plot I-V characteristics of Thyristors (SCR) experimentally	2
02	Analyze the Firing Circuit of SCR	2
03	Study of switching characteristics of Power BJT/ Power MOSFET/ IGBT	2
04	Single phase half or full wave-controlled rectifier circuit	2
05	Three phase half /fully controlled rectifier circuit with R /RL Load	2
06	Design and Implementation of DC-DC Buck converter	2
07	Design and Implementation of DC-DC Boost converter	2
08	Single phase Inverter (IGBT/MOSFET based)	2
09	Three phase Inverter (IGBT/MOSFET based)	2
10	Design and implementation of snubber circuit	2
11	Design and implementation of IGBT gate driver circuit	2

12	Implementation and testing of LED driver circuit	2
Group-B- Simulation Based Experiments		
1	Three phase half /fully controlled rectifier circuit with R & RL load	2
2	Three phase VSI (120° and 180° conduction mode)	2
3	SPWM or any other PWM Voltage source Inverter	2
4	Single Phase PWM Rectifier	2
6	Bidirectional DC-DC Converter	2
7	DC-DC Buck/Boost/Buck Boost converter in CCM	2
9	Power factor correction in converters	2

Any other experiments based on syllabus which will help students to understand topic/concept.

Sr No	List of Assignments / Tutorials
01	Assignments/Tutorials should be based on the entire course of Power Electronics Devices and Circuits as per the mentioned Modules.

	(Group Project)								

Note: * Two hours of practical class to be conducted for full class as demo/discussion/theory.

Lab objective:

1. To learn electrical safety protocols, fire prevention measures, and the proper use of electrician tools and accessories.
2. To understand the working principles of electrical measuring instruments and develop skills in accurate measurement techniques.
3. To interpret electrical diagrams, apply standard symbols, and create schematic and wiring layouts.
4. To gain knowledge of wiring standards, earthing techniques, and power factor improvement methods
5. To troubleshoot and repair common electrical appliances, ensuring proper functionality and safety.
6. To use CAD software for electrical circuit design, wiring layouts, and simulations.

Lab outcome:

1. Demonstrate electrical safety practices, proper use of fire extinguishers, and effective handling of tools and accessories.
2. Identify, operate, and interpret readings from electrical measuring instruments for accurate analysis.
3. Interpret and analyze electrical schematics, prepare single-line diagrams for electrical systems, and apply standard symbols and conventions to develop electrical drawings.
4. Implement wiring and earthing systems, measure earth resistance, and apply power factor correction techniques.
5. Identify faults in household electrical appliances, carry out necessary repairs, test the repaired devices for safe operation, and ensure their proper functioning.
6. Design and simulate electrical wiring layouts using CAD software and create panel board diagrams with industry-standard accuracy.

Detailed Syllabus:

Module No.	Name of Module	Detail Contents	Hours	LO Mapping
1	Electrical Safety, Accessories & Tools	*Safety:* IE safety rules, fire safety, types of fire extinguishers, and personal protective equipment (PPE). *Electrical Accessories:* Switches and their Types, Lamp Holders and their Types, Ceiling Rose, Pin Plug, Socket and Adopter, Precautions for using Aluminium Cables, Difference between	8	LO1

		Insulated Wires and Cables, Measurement of Wires, Types of Wires, and Types of Cables. *Electrician Tools:* Plier Insulated, Plier Side Cutting, Screw Driver, Neon Tester, Hammer, Pincer, Chisel, Hand Drill Machine, Allen Key, Grease Gun, Out Side Micrometer, Motorised Bench Grinder, Rawl plug tool and bit, Crimping Tool, Wire stripper, Try Square, Outside and Inside Divider Calliper, Pliers flat nose, Pliers round nose, Tweezers, Spanner, Gauge, wire imperial, file set, Soldering Iron. **Suggested Lab Activities:** 1. Identify and explain the meaning of various safety signs used in electrical labs and installations. 2. Experiment on the fire extinguishers. 3. Use tools like pliers, screwdrivers, wire strippers, and crimping tools for various tasks. Identify and demonstrate the use of switches, sockets, lamp holders, plugs, and adapters.		
2	Use of Lab Equipments	*Standard Lab Equipments:* Multi-meter, Power Supply, Function Generator, Tachometer, thermometer, clamp-on meter, DSO etc. **(Study all the equipments)** *Special Measuring Equipments:* True RMS multi-meter, Lux meter, Megger, LCRQ meter, Power Meter, Thermal Analyser, Anemometer, Humidity Meter, Earthing Resistance meter, Insulation Resistance meter etc. **(Study at least 3 such equipments)** *Special Lab Equipments:* High Power DC Supply, Isolated DSO, Power Analyser, Emulators etc. **(Study at least one of such equipments)** **Lab Activities:** Students should be trained to use these classes of lab equipments with good expertise achieved. Students should clearly understand and differentiate the situations in which use of each of these equipments is best suitable.	4	LO2
3	Electrical Drawing & Schematics	Importance and applications of electrical drawings in installations and maintenance, Types of electrical drawings: Schematic diagrams, Wiring diagrams, Interconnection diagram, Single-line diagrams, Layout diagrams. Overview of standards and codes for electrical drawings (e.g., IS, IEC standards). Electrical Symbols and Conventions **Lab Activities:** 1. Prepare list of electrical symbols. 2. Students should study the actual electrical supply	8	LO3

		system on institute campus, prepare SLD for the network and detailed report on actual ratings of the complete system. **3.** Analyze a single-line diagram for an industrial substation.		
4	Practical Aspects of Wiring, Earthing, and Power Factor Correction	Wiring materials, wire selection, conductor sizing, and wiring standards (IS-732, section 4). Importance of Earthing in Electrical Installations, Types of Earthing: Plate Earthing, Pipe Earthing, and Rod Earthing, Earth Resistance and Its Measurement, Basics of Power Factor and Its Importance, Power Factor Improvement Methods, Types of Energy Meters and Their Installation Procedures **Lab Activities:** Students should perform following experiments (Any five) 1. Identify different types of cables/wires, switches and their uses. 2. Wiring of simple light circuit for controlling light/fan point (PVC conduit wiring and wiring accessories). 3. Wiring of fluorescent lamps and light sockets (6 A). 4. Wiring of Power circuit for controlling power device (16A socket) 5. Design of Staircase wiring / Go-down wiring / Tunnel wiring 6. Measurement of Earthing resistance. 7. Installation and testing of an energy meter. 8. Measuring power factor using a power meter. Checking load distribution in a domestic circuit.	12	LO4
5	Repair and Maintenance of House-hold Appliances and Machines	Testing, fault finding, Dismantling, assembling and testing after repairs of house hold appliances like standard fan and regulator, BLDC fan, heater, geyser, mixer, washing machine, microwave oven, LED lamps/tubes, Induction Cooker, Air cooler etc. **Lab Activities:** Check the fault finding and repair of electrical appliances. (Minimum three such appliances must be studied)	4	LO5
6	Electrical CAD & Circuit Simulation	Basics of Electrical CAD Software, Importance of CAD in Electrical Drawings, Understanding Electrical Symbols and Components in CAD, Single-Line and Schematic Diagrams, Drawing Electrical Wiring Layouts in CAD, Understanding Panel Board Diagrams, Power and Lighting Circuit Design in CAD Lab Activities: 1. Drawing basic electrical symbols in CAD software. 2. Creating a simple domestic wiring diagram using CAD. 3. Simulating a basic electrical circuit in CAD.	16	LO6

		4. Creating a detailed wiring diagram for a small house/shop using CAD. 5. Designing a simple panel layout in CAD. Generating a bill of materials (BOM) for the designed circuit.		

Suggested List of Capstone Projects:

1. **Home Wiring & Power Management –** Design and implement a house/shop wiring system with CAD diagrams, sockets, lighting, and power factor analysis.
2. **Smart Switchboard with Indicators –** Develop a switchboard with LED indicators for load status, overload protection, and CAD-based design.
3. **Industrial Panel Wiring Simulation –** Create a scaled industrial panel, design in CAD, and test three-phase wiring with safety measures.
4. **Household Appliance Repair & Testing –** Diagnose and repair three appliances (fan, heater, mixer), test insulation resistance, and document faults.
5. **Earthing System & Safety Compliance –** Install and test plate/pipe earthing, measure resistance, and compare methods with IS-732 standards.
6. **CAD-Based Electrical Wiring Layout –** Design a complete electrical wiring plan for a facility, including lighting, sockets, and BOM.
7. **Fire Safety & Electrical Hazard Kit –** Demonstrate fire extinguisher use, short circuit scenarios, and electrical safety compliance.
8. **Smart Energy Metering & Power Factor Correction –** Install an energy meter, analyze load variations, and implement capacitor banks.
9. **Electrical Network Survey & Report –** Study campus/building power distribution, create SLD in CAD, and suggest efficiency improvements.
10. **Automated Lighting & Power Control –** Implement a timer-controlled circuit for energy-efficient lighting and fan control.

Note: Faculty can offer any other project based on the syllabus which will help students to understand the topic/concept and implement it for real-life application.

Suggested Software Tools to be Used:

- Students should be encouraged to use open source softwares such as AutoCAD Electrical (Student Version), QElectroTech, KiCad, FreeCAD (with Electrical Workbench), 3D CAD with electrical features, and TinyCAD for carrying out the experiments.
- Use of Professional Licensed versions of softwares like AutoCAD Electrical, SolidWorks Electrical, EPLAN Electric P8, SEE Electrical, ETAP, and OrCAD is also allowed/

Text Books:

1. J. B. Gupta, Electrical Installation Estimating & Costing, S. K. Kataria & Sons, 2009
2. Raina Bhattachraya, Electrical Design Estimating and Costing, New Age International,
3. Sham Tickoo, AutoCAD Electrical 2021: A Tutorial Approach, 2nd Edition, CADCIM Technologies
4. K B. Bhatia, Electrical Appliances and Devices, Khanna Publications

Reference Books:

1. K B. Bhatia, Fundamentals of Maintenance of Electrical Equipments, Khanna Publications
2. BIS SP 30:National Electrical Code
3. Electricity Act 2003

Assessment:

Term Work shall consist of at least 10 to 12 practicals' based on the above syllabus. Also, student need to submit a capstone project based on the above syllabus.
Journal: 15 marks
Experiment: 20 marks
Attendance: 5 marks
Capstone Project: 10 marks

Final Presentation & Practical/Oral Examination: 25 Marks

Students will present their project, including:

- Problem Statement and Clarity
- Innovativeness of the Solution
- Cost-effectiveness and Societal Impact
- Functionality of the Working Model
- Effective Use of Engineering Norms & Standards
- Individual Contribution and Teamwork
- Clarity in Written and Oral Communication

Letter Grades and Grade Points:

Semester GPA/ Programme CGPA Semester/ Programme	% of Marks	Alpha-Sign/ Letter Grade Result	Grading Point
9.00 - 10.00	90.0 – 100	O (Outstanding)	10
8.00 - < 9.00	80.0 - < 90.0	A+ (Excellent)	9
7.00 - < 8.00	70.0 - < 80.0	A (Very Good)	8
6.00 - < 7.00	60.0 - < 70.0	B+ (Good)	7
5.50 - < 6.00	55.0 - < 60.0	B (Above Average)	6
5.00 - < 5.50	50.0 - < 55.0	C (Average)	5
4.00 - < 5.00	40.0 - < 50.0	P (Pass)	4

Below 4.00	Below 40.0	F (Fail)	0
Ab (Absent)	-	Ab (Absent)	0
